

ECHOCARDIOGRAM

An ultrasound of the heart which uses standard 2D, 3D and Doppler ultrasound to create images of the heart.

1. You are settled comfortably in an area where you need to remove your ornaments, accessories, purse, belt etc.
2. The technologist will use an ultrasound probe with the conducting gel on your chest, stomach and neck to get different views of the heart.
3. In case of female patients, the procedure is performed only by a female technologist.
4. The technologist will then remove the electrodes and wipe off the excess gel with tissues.
5. The procedure takes approximately 15 minutes and is completely painless.
6. Reports will be issued within 30 minutes post procedure at the reception.
