

NERVE CONDUCTION STUDY-NCS

A non-invasive test which measures how well and how fast the nerves can send electrical signals.

1. No dietary restrictions
2. You are settled comfortably in an area where you need to remove your ornaments, accessories, purse, belt etc.
3. The technician will place electrodes on the affected limbs after disinfecting with gel.
4. A very small amount of current is applied to measure the electrical signals in the nerve.
5. You may feel some discomfort / slight pain depending on how strong the electric impulse is. Technician will give as much gap between stimulations, in order to minimize the discomfort.
6. The technician will remove the electrodes as well as clean the gel well using cotton & tissues.
7. Reports will be issued in an hour at the reception.
